

(User Interface Evolution)

Many roads lead to RIA... but which one truly delivers?

A major contributor to an application's return on investment is end-user productivity and in this sense form-based web-apps just don't cut the mustard. In the 10 years since their inception, Rich Internet Applications (RIAs) have proven indispensable aids to enhancing end-users' output as well as their rate of delivery. Yet at the same time, the price for achieving this enhanced experience has been an enormous increase in application complexity.

Faced with a range of complex options for implementing RIA, which road should you choose? No one is more qualified to help you answer this question better than Canoo.

What we do

- ▶ Java based application development
- ▶ Software as a Service
- ▶ Cloud Computing
- ▶ Web Enabling
- ▶ Performance Improvement
- ▶ Application Frameworks, Planning, Concepts
- ▶ Software Refactoring
- ▶ Business Integration
- ▶ Demands Assessment
- ▶ Testing environments
- ▶ Planning environments
- ▶ Architecture consulting
- ▶ Reviews and opinions

Who we are

Canoo Engineering is the company of choice for web-based business applications, Rich Internet Applications (RIA), linguistic morphology and word analysis systems. With over 10 years of experience constructing Java-based business applications and some of the most experienced Java developers in Europe, it's no wonder Canoo is the preferred supplier to some of the world's leading organizations.

Canoo's products are used by our clients and partners as well as by our 50 developers. In over 50 countries worldwide, they are boosting the development of web applications and word analysis systems.

How we stimulate business

Navis developed its SPARCS N4 Terminal OS with Canoo's products. Servicing more than 170 deep-sea ports in 50 countries, their solution represents a cornerstone of world-wide shipping logistics.

"We are impressed by the high quality of Canoo's products. Canoo offers excellent support".

J. SHIELDS (**Navis**)

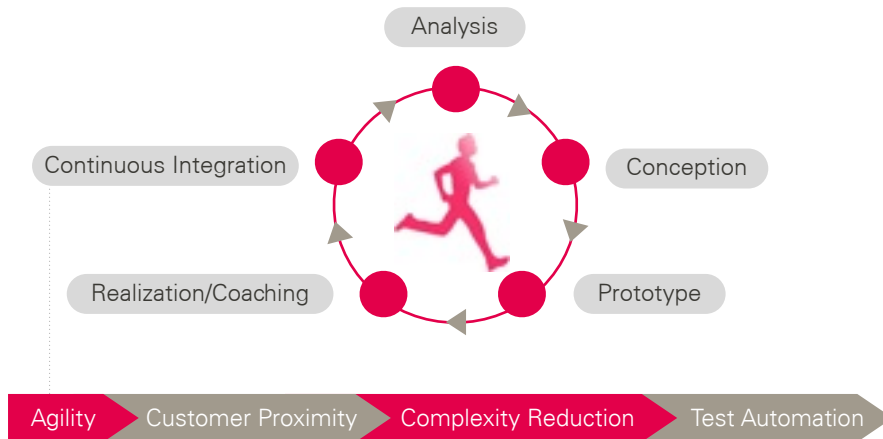

"We tested several RIA-options but none of these could satisfy our requirements. For us there is no alternative to Canoo's UltraLightClient.

If ULC hadn't been available as a product, we would have written it ourselves".

C. HINTERMANN (**Abacus**)

How we work

Following an integrated approach, which focuses the full life-cycle of Web Applications, Canoo's project success rate stands at a remarkable 100%.

Our products

RIASUITE

Cost efficient and mature framework for RIA

WEBTEST

Web application testing as it is meant to be

VOLTA

Efficient industry solution for electrical companies

LANGUAGETOOLS

Lightning fast word analysis and text mining

CANOONET

Comprehensive resource for the German language
